Influenza (Flu) & Covid-19

Staying healthy and safe through the pandemic

This year the flu shot (influenza immunization) is very high priority for everyone due to the likelihood of the flu viruses co-circulating with COVID-19 and the effects of the concurrent circulation of influenza on health care system capacity.

Critical Steps:

- **PROTECT** high risk people from complications (seniors, people with chronic conditions like COPD, asthma, diabetes)
- **PROTECT** against co-infection of COVID-19 and flu
- **REDUCE** flu outbreaks in group living settings
- **REDUCE** deaths and health care system capacity.
- **HELP** maintain health system capacity for those with COVID-19 infection.

INFLUENZA

Muscle Aches
Fatigue
Loss of appetite
Chills

Symptoms Common to all

Nasal Congestion • Fever
Cough • Headache
Diarrhea • Sore Throat
Runny Nose

COVID-19

Difficulty Breathing
Pneumonia in both lungs
New smell or taste
Disturbance

Common Cold

Watery Eyes
Sneezing
